Profile

Product designer growing into product management. 2 years designing product flows in Figma, backed by 2 years of Vue/Nuxt front-end — I take features from research to production code myself.

Experience

BnBerry Front-end Developer & Product Designer

US-based booking & hospitality software. Owned features end to end — research, Figma prototypes, Vue/Nuxt + Tailwind implementation.

- Cut billing-related support tickets by ~30% by redesigning account & billing management — merged 4 scattered screens into one self-serve dashboard, from research to Nuxt release.
- Shortened the DBS Pilot desktop booking flow from 6 to 4 steps by grouping dates, guests and payment on fewer screens, validated in clickable Figma prototypes.
- Reduced initial page load by ~35% (Lighthouse 60 → 85) by refactoring the front-end: code-splitting, lazy-loaded routes, removing unused dependencies.
- Took the BookBerry AI landing from brief to web + mobile prototypes in 2 weeks; built an internal service that syncs Gmail signatures company-wide.

Nov 2023 – Nov 2026 | Remote

Mapotic Angular Developer

Map-based web platform. Cut map load time by 20% by lazy-loading map layers and optimising marker rendering in Angular; turned customer feedback into UX fixes without direct mentorship.

Apr 2024 – Aug 2024 | Prague, CZ

BnBerry QA Engineer → Automation

Joined as a student. Cut manual regression from ~2 days to ~4 hours per release by building an automated suite (Jest, Selenium, Jenkins), then moved into front-end.

Dec 2021 – Nov 2023 | Remote

Beyond Code

Concept Cases

2GIS — self-serve ad purchase

Azbuka Vkusa — order editing

Uralsib — login & access recovery

Independent studies, not client work

Toolkit

Figma — prototyping, design systems

Vue · Nuxt · Tailwind CSS · Angular

Claude Code · Claude Design

Jest · Selenium · Git · Jira

Education

University of Pardubice

B.Sc. in Information Technologies · Thesis: Advanced AI Applications

2024 | Pardubice, CZ
